

Project Overview

The AI system Gemma has translated most of the given texts too literally, not considering idiomatical expressions and phrases' metaphorical meanings. In addition Gemma were not satisfactory adapting to different types of articles' writing styles. In conclusion articles translated by the AI system Gemma were generally very hard to understand for a Turkish speaker.

Methodology

1. Selected English language articles from different domains.
2. Generated AI translations
3. Reviewed AI outputs against the source text.
4. Identified meaning, terminology, fluency and contextual issues.
5. Produced human post-edited versions.
6. Evaluated translation quality.
7. Documented representative post-editing decisions.

Evaluation Method

- Meaning Accuracy
- Fluency
- Terminology
- Context
- Style
- Grammar/QA

Key Findings

- AI translations were generally understandable but sometimes lacked contextual precision.
- Terminology required human intervention in specialized texts.
- Metaphorical expressions occasionally required substantial post-editing.
- Human post-editing improved naturalness and context appropriateness.

Conclusion

This project demonstrated that AI-generated translations can provide a useful first draft, while human post-editing remains important for contextual accuracy, terminology, naturalness and stylistic consistency.
